

Turning Claims Complexity into Clarity — Powered by AI

02 ABOUT THE INDUSTRY

The insurance industry sits at the intersection of massive data volumes and high-stakes decisions. From underwriting and claims to customer retention, insurers are under pressure to be faster, more accurate, and more compliant than ever. Legacy systems, siloed data, and manual processes slow down operations and erode customer trust. Techknomatic helps insurers modernize their data backbone and embed AI across the full policy lifecycle.

03 WHAT WE SOLVE

- Slow, manual claims adjudication driving up processing costs and TAT
- Inaccurate risk scoring due to fragmented underwriting data
- High customer churn from poor service experience and delayed responses
- Fraud slipping through due to lack of real-time pattern detection
- Compliance gaps from unstructured document and policy management

04 INSURANCE ANALYTICS MODULES

Module	What It Covers
Claims Analytics	TAT tracking, settlement analysis, provider performance
Policy Performance	Portfolio analysis, renewal rates, lapse prediction
Underwriting Insights	Risk scoring, pricing optimization, case prioritization
Agent Productivity	Sales metrics, activity tracking, pipeline management
Fraud Detection	Pattern recognition, anomaly detection, investigation support
Customer Analytics	Churn prediction, cross-sell opportunities, NPS tracking

05 LOCATION INTELLIGENCE FOR INSURANCE

ESRI-Powered Geo-Analytics

- Claim heatmaps and spatial clustering
- Branch and agent territory optimization
- Risk zone mapping and exposure analysis
- Geotagged CRM leads and distribution network

Real-World Impact

Our Insurance GIS analytics have helped carriers reduce claim TAT by 22% and improve renewal targeting through location-based customer insights.

ESRI Silver Partner Implementation

06 USE CASES

Automated Claims Triage Placeholder: An insurance carrier reduced claims processing TAT by X% using AI-driven triage that auto-classifies claims by complexity, coverage type, and fraud risk.	Underwriting Risk Intelligence Placeholder: A leading insurer improved risk scoring accuracy by X% using geospatial and behavioral data — enabling more precise premium pricing.	Churn Prediction & Retention Placeholder: An insurer identified at-risk policyholders 60 days before renewal, enabling proactive outreach that improved retention rates by X%.

From Wellhead to Boardroom — Intelligence That Drives Every Decision

02 ABOUT THE INDUSTRY

The Oil & Gas sector operates in one of the world's most data-rich yet data-underutilized environments. Sensor streams from refineries, pipeline telemetry, SCADA systems, and logistics networks generate enormous volumes of operational data daily — most of it siloed and underanalyzed. In an industry where unplanned downtime costs millions per hour and environmental compliance is non-negotiable, Techknomatic brings full-stack data and AI capabilities purpose-built for upstream, midstream, and downstream operations.

03 WHAT WE SOLVE

- Unifying siloed data across SCADA, DCS, ERP, and historian systems
- Replacing reactive maintenance with predictive, AI-driven equipment monitoring
- Delivering sub-minute latency on refinery and field operations data
- Making HSE compliance visible, trackable, and auditable in real time
- Giving leadership live production KPIs — not end-of-week reports
- Automating emissions, water, and waste tracking for regulatory compliance

04 REFINERY ANALYTICS MODULES

Module	What It Covers
Operations Overview	Real-time production KPIs and targets
Unit Performance	Distillation, conversion, yield analysis
Energy Dashboard	Fuel consumption, steam balance, efficiency
Equipment Health	Vibration, temperature, run-length tracking
Environmental	Emissions, water, waste tracking
Safety Analytics	Incidents, near-misses, PTW tracking

05 SCADA & PROCESS INTEGRATION

Systems We Connect

- SCADA (Wonderware, InTouch, Ignition)
- DCS (Honeywell, Yokogawa, ABB)
- PI System and historians
- LIMS for quality data
- ERP for logistics and maintenance
- IoT sensors for equipment monitoring

Real-Time Data Pipeline

We build cloud-native pipelines that ingest process data from SCADA/DCS, normalize it, and make it available for analytics with sub-minute latency.

Tech Stack: Azure | Snowflake | Databricks | Power BI

06 USE CASES

Predictive Equipment Maintenance Placeholder: An upstream operator reduced unplanned downtime by X% using ML models on sensor data — predicting failures up to 2 weeks in advance.	Refinery Energy Optimization Placeholder: A refinery deployed the Energy Dashboard module and identified inefficiencies resulting in X% reduction in energy cost per barrel within the first quarter.	HSE & Safety Incident Reduction Placeholder: By integrating Safety Analytics with their PTW system, an O&G operator reduced near-miss incidents by X% and improved compliance tracking.

Resolve Faster. Predict Smarter. Serve Better — AI for Modern ITSM

02 ABOUT THE INDUSTRY

IT Service Management teams are the backbone of enterprise operations — and under immense pressure. Ticket volumes are exploding, SLAs are tightening, and end-user expectations have never been higher. Yet most ITSM operations still rely on manual triaging, keyword-based routing, and reactive problem-solving. Techknomatic brings AI and analytics to ITSM — automating the repetitive, surfacing the critical, and helping IT leaders make proactive decisions before incidents become outages.

03 WHAT WE SOLVE

- High ticket volumes overwhelming L1 and L2 support teams
- SLA breaches caused by poor ticket routing and prioritization
- No self-service options forcing users to log every minor request
- Reactive incident management with no early warning signals
- Siloed ITSM data that never gets turned into actionable intelligence

04 ITSM ANALYTICS DASHBOARD MODULES

Module	What It Covers
Executive Dashboard	CIO-level KPI overview
SLA Dashboard	Breach risk and compliance
Incident Analytics R	Trends and patterns
Change Management	Change success rates
Asset CMDB	Hardware and software tracking
Vendor Performance	Vendor SLA tracking
Team Productivity	Agent and group metrics
Service Request	SR categorization and FC

05 ITSM PLATFORM INTEGRATION

Supported Platforms

- ServiceNow
- ManageEngine
- Freshservice
- BMC Remedy
- Jira Service Management

BI Output

Power BI reports ready to publish to your Power BI Service with role-based views for CIO, IT Manager, and L1/L2 teams.

Also available: ITSM Plug & Play — 20+ pre-built dashboards, live in 2 weeks.

06 USE CASES

Intelligent Ticket Auto-Resolution Placeholder: An enterprise IT team achieved X% auto-resolution of L1 tickets using TicketIQ on ServiceNow — freeing staff to focus on complex incidents.	SLA Breach Prediction & Prevention Placeholder: With early breach alerts from the SLA Dashboard, an IT ops team reduced SLA violations by X% quarter-on-quarter through dynamic re-prioritization.	CIO-Level ITSM Visibility Placeholder: A global enterprise replaced 6 weekly manual reports with a single Executive Dashboard — consolidating ticket trends, vendor SLAs, and change success rates live.

Smart Factories Start with Smarter Data — AI for Modern Manufacturing

02 ABOUT THE INDUSTRY

Manufacturing is in the midst of a fundamental transformation. Industry 4.0 has unlocked massive potential — but most manufacturers are still struggling to connect their ERP, MES, and SCADA systems, make sense of shop floor data, and translate operational metrics into strategic decisions. Whether managing discrete, process, or hybrid manufacturing — the challenges of downtime, quality failures, supply chain disruption, and energy costs demand an intelligent, data-driven response. Techknomatic brings that intelligence to your floor — and your boardroom.

03 WHAT WE SOLVE

- Unplanned machine downtime eating into OEE and production targets
- Quality defects detected too late in the cycle — driving costly rework and waste
- Supply chain blind spots causing procurement delays and line stoppages
- Disconnected ERP, MES, and SCADA systems making plant data invisible to leadership
- Manual production reporting that is always lagging, never live

04 MANUFACTURING DASHBOARD MODULES

Module	What It Covers
OEE Dashboard	Availability, performance, quality
Production Line	Output, cycle time, rejects
Maintenance	PM schedules, work orders, costs
Quality Control	Defects, FPY, CAPA
Energy & Utilities	Consumption, costs, targets
Inventory	WIP, finished goods, warehousing
Supply Chain	Inbound, outbound, lead times
Cost Analytics	Per unit, per plant, per shift

05 SYSTEMS INTEGRATION

ERP & MES We Connect

- SAP (PP, QM, PM modules)
- Oracle ERP
- Microsoft Dynamics
- MES Systems
- SCADA and IoT Sensors
- CMMS for Maintenance

Multi-Plant Visibility

We have implemented manufacturing analytics across multiple plants with standardized KPIs and plant-specific drill-downs.

Automotive | Industrial Equipment | Electronics
| Food & Beverage

06 USE CASES

OEE Improvement Across Production Lines Placeholder: A discrete manufacturer achieved X% OEE improvement by identifying top downtime contributors per shift using the OEE Dashboard connected to MES and SCADA systems.	Quality Defect Reduction with CAPA Tracking Placeholder: Integrating Quality Control analytics with SAP QM reduced rejection rates by X% and cut CAPA closure time in half across 4 production lines.	Multi-Plant Supply Chain Visibility Placeholder: A 6-plant enterprise standardized inbound lead time tracking and reduced excess WIP inventory by X% through real-time demand-supply visibility.
