

# FreightIQ — Website Page Content

*Logistics & Freight Pricing / Solution Platform*

**Page URL suggestion:** /platforms/freightiq or /solutions/freightiq

**Meta Title (SEO, ≤60 chars):** FreightIQ — AI Freight Pricing & Rate Optimization Platform

**Meta Description (SEO, ≤160 chars):** FreightIQ is an AI-powered freight pricing platform that automates dynamic rate optimization, multi-carrier comparison, and instant quote generation for modern logistics.

**Primary Keywords:** freight pricing platform, AI rate optimization, dynamic freight pricing, automated quote generation, multi-carrier rate comparison, freight quotation software

**Secondary Keywords:** LCL FCL pricing, air freight quotation, freight forwarder software, real-time carrier rate API, freight margin optimization, 3PL pricing automation, logistics pricing intelligence

**H1:** FreightIQ — AI-Powered Dynamic Freight Pricing & Rate Optimization Platform

---

## 1. Hero + Tagline

### Product Name (H1)

FreightIQ

### Tagline (H2 / hero sub-headline)

Intelligent Freight Pricing for Faster Quotes and Higher Profitability

### Hero supporting line

AI-powered dynamic freight pricing — real-time carrier rates, multi-modal support, and instant quote generation. Built for logistics enterprises that compete on speed and margin.

### Hero CTAs

- Primary button: Book a Live Pricing Demo
- Secondary button: See FreightIQ in Action (anchor to product walkthrough / sample quote)

### Hero visual suggestion

Animated illustration showing fragmented carrier rate inputs flowing into the FreightIQ engine and emerging as a single, customer-ready freight quotation — visually conveying 'hours → seconds' for quote turnaround.

### Trust signal (small text under CTAs)

Multi-Modal Pricing: LCL · FCL · Air Freight · Multi-Modal Logistics

---

## 2. About the Industry & Problem Statement

### Section Heading: The Freight Pricing Challenge

*Freight pricing is one of the most complex, time-sensitive operations in logistics — and still one of the most manual.*

### Opening paragraph

Every freight quote is a race against the clock. Customers expect rates in minutes. Carriers update pricing daily. Routes shift with seasonality, capacity, and fuel. Yet most logistics providers still build quotations through spreadsheets, email chains, and disconnected carrier portals — losing deals to faster competitors and leaving margin on the table with every shipment. The pricing operations that should drive profitability instead drain it.

### Common Operational Pain Points

- Manual freight rate calculations across multiple carriers and modes
- Delayed customer quote responses — hours or days, not minutes
- Inconsistent pricing across carriers, regions, and sales teams
- Rapidly changing market rates that spreadsheets can't keep up with
- Lack of centralized pricing intelligence across the business
- Difficulty optimizing margins across high-volume shipments
- Limited visibility into historical pricing trends and carrier performance

### Impact framing

The result: slower quote turnaround, reduced competitiveness, revenue leakage through under-priced shipments, higher operational overhead, and weaker customer experience — exactly when logistics buyers expect faster, sharper, more transparent pricing.

---

## 3. What FreightIQ Solves

---

### Section Subheading

*From manual freight pricing → intelligent real-time rate optimization. Quote faster. Optimize better. Scale smarter.*

### Intro paragraph

FreightIQ is an AI-powered freight pricing and rate automation platform that intelligently calculates, optimizes, and automates freight quotations across logistics operations. The platform combines real-time carrier connectivity, AI-driven dynamic pricing, multi-modal support, and historical analytics to deliver freight quotes in seconds — with the margin discipline of a centralized pricing function.

### Layout suggestion

3-column × 2-row capability grid (6 cards). Each card = icon + capability title + 1-line outcome + 4–6 feature bullets.

#### Capability 1 — Real-Time Carrier API Integration

*Outcome: Live carrier rates and capacity — directly in your quoting workflow.*

- Real-time carrier rate retrieval via API
- Automated pricing synchronization across carriers
- Multi-carrier rate comparison in a single view
- Dynamic availability and capacity checks
- Up-to-the-minute pricing accuracy
- Reduced manual coordination effort

## **Capability 2 — AI-Powered Dynamic Pricing Engine**

*Outcome: Market-aware pricing that protects margin and stays competitive.*

- Demand fluctuation modeling
- Route and carrier capacity factoring
- Shipment urgency-based rate adjustment
- Historical pricing pattern intelligence
- Seasonal freight trend awareness
- Intelligent margin optimization

## **Capability 3 — Multi-Modal Freight Support**

*Outcome: Unified freight pricing across every shipment type and transport mode.*

- LCL (Less than Container Load) pricing
- FCL (Full Container Load) pricing
- Air freight quotation support
- Multi-modal logistics operations
- Mode-specific cost factor handling
- Consistent pricing logic across modes

## **Capability 4 — Instant Quote Generation**

*Outcome: Customer-ready freight quotations in seconds — not hours.*

- Automated rate calculation across carriers
- Intelligent rate comparison and ranking
- Customer-ready quote document generation
- Dynamic pricing adjustments at quote time
- Fast sales-team turnaround
- Higher win rate through speed-to-quote

## **Capability 5 — Historical Freight Analytics**

*Outcome: Turn historical pricing into forward-looking decisions.*

- Historical rate trend analysis
- Carrier performance visibility
- Margin and shipment profitability analysis
- Route pricing intelligence
- Market trend monitoring
- Shipment cost optimization insights

Capability 6 — Intelligent Rate Comparison

Outcome: The right rate, every time — across cost, speed, and margin.

- Best-cost option identification
- Fastest-delivery option ranking
- Margin impact analysis per option
- Carrier competitiveness benchmarking
- Operational efficiency visibility
- Decision-ready pricing recommendations

4. Industries We Serve

Section Subheading

Purpose-built for freight-intensive operations across the global logistics value chain.

Layout suggestion

Light 6-tile icon grid (3×2 on desktop, 2×3 on tablet, 1×6 on mobile). Each tile = industry icon + industry name + 1-line value statement. Depth lives in Use Cases below.

| Icon                                                                                | Industry                      | One-Line Value Statement                                                                 |
|-------------------------------------------------------------------------------------|-------------------------------|------------------------------------------------------------------------------------------|
|  | Freight Forwarding & 3PL      | Instant multi-carrier quoting and margin optimization for forwarders and 3PL providers.  |
|  | Import & Export               | Dynamic landed-cost visibility and shipment cost estimation for global trade operations. |
|  | E-Commerce & Retail Logistics | Real-time shipping cost optimization and multi-modal pricing for retail supply chains.   |
|  | Manufacturing & Industrial    | Inbound and outbound shipment pricing automation for industrial supply chains.           |
|  | Air Cargo & Express           | Dynamic, urgency-based pricing for time-critical air and express logistics.              |
|  | Global Shipping & Transport   | Enterprise-wide freight pricing standardization across regions and routes.               |

**Developer note:** Replace emoji icons with branded SVG icons matching the rest of the site. Each tile can deep-link to the matching Use Case card.

## 5A. Platform Architecture

---

### Section Heading: How FreightIQ Works

*A 5-stage pricing intelligence stack — from carrier connectivity to customer-ready quote, in seconds.*

#### Intro line

FreightIQ is built as a layered pricing intelligence platform that connects to carrier systems in real time, applies AI-driven dynamic pricing logic, optimizes across cost / speed / margin, and generates customer-ready quotations — all within a single automated flow.

#### Layout suggestion

Horizontal 5-stage flow (left → right) on desktop, vertical stepper on mobile. Each stage = numbered badge + icon + 1-line description.

| Stage | Phase                        | What Happens                                                                                                                             |
|-------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 01    | Carrier Connectivity         | Real-time API integrations pull live rates, capacity, and availability from multiple carriers across modes (LCL, FCL, air, multi-modal). |
| 02    | Pricing Intelligence Layer   | AI engine processes carrier inputs against demand signals, route conditions, urgency, and seasonality to generate market-aware pricing.  |
| 03    | Margin & Optimization Engine | Pricing options are evaluated for cost, delivery speed, carrier competitiveness, and margin impact — surfacing the best-fit options.     |
| 04    | Historical Analytics Engine  | Continuously learning layer uses historical shipment, rate, and margin data to refine pricing recommendations and surface trends.        |
| 05    | Quote Generation & Delivery  | Customer-ready freight quotations are generated automatically and delivered to sales teams or directly to customers via integrations.    |

#### Closing line

*FreightIQ doesn't just calculate freight rates — it optimizes every quote for speed, margin, and competitiveness.*

---

## 5B. System & Process Integration

---

### Section Heading: Built to Plug Into Your Logistics Stack

*FreightIQ integrates with the carrier systems, TMS, ERP, and CRM platforms your operations already run on — so pricing flows directly through your existing workflow.*

**Intro paragraph**

FreightIQ is designed as an API-first platform that plugs into the operational systems freight businesses already run on. Whether you're issuing quotations from a CRM, executing shipments through a TMS, posting costs into an ERP, or coordinating carriers directly — FreightIQ connects without disrupting your existing workflows, and pushes intelligent, optimized pricing into every quote your team generates.

**Layout suggestion**

2-column integration matrix. Add a carrier-system logo strip below (representative carrier and freight system logos).

| Integration Category    | Supported Systems & Protocols                                                                       |
|-------------------------|-----------------------------------------------------------------------------------------------------|
| Carrier Systems         | Direct carrier APIs · Multi-carrier aggregator integrations · Sea / Air / Road carrier connectivity |
| TMS Platforms           | Transportation Management Systems · Freight execution platforms · Custom TMS via REST               |
| ERP Systems             | SAP · Oracle · Microsoft Dynamics · NetSuite · Custom ERPs                                          |
| CRM & Sales Platforms   | Salesforce · HubSpot · Zoho · Custom CRMs · Quote-to-cash workflows                                 |
| APIs & Developer Access | REST APIs · Webhooks · Real-time pricing endpoints · SDK access                                     |
| Data Refresh Modes      | Real-time carrier rate sync · Scheduled refresh · On-demand rate fetch                              |
| Deployment Modes        | Cloud SaaS · Private VPC · Hybrid · On-premise (enterprise logistics)                               |

**Closing line**

*From carrier API to customer quote — in a single, automated pricing flow.*

---

## 6. Use Cases

**Section Subheading**

*Six domain-specific deployments where FreightIQ is replacing spreadsheet-driven freight pricing with intelligent automation.*

## Layout suggestion

6 compact horizontal cards in a 3+3 layout. Each card: Title → Subtitle → Crux (~40 words) → Focus Areas pill row → Outcome tag.

### **Title: Freight Forwarding & 3PL Providers**

**Subtitle:** *Instant multi-carrier quoting and margin optimization for forwarders and 3PLs.*

**Crux:** FreightIQ generates instant freight quotations across carriers, compares rates, and applies customer-specific pricing rules. Sales teams quote faster, manage LCL/FCL shipments centrally, and gain operational pricing intelligence that lifts both win rate and margin.

**Focus Areas:** Instant Quotes · Multi-Carrier Comparison · Margin Optimization · LCL/FCL Management · Sales Intelligence

**Outcome:** Faster quote turnaround · Higher win rate · Improved margin discipline

### **Title: Import & Export Businesses**

**Subtitle:** *Dynamic landed cost visibility for international trade.*

**Crux:** Estimate shipment costs across international routes, optimize carrier selection for exports, and gain dynamic landed-cost visibility for container shipments. FreightIQ also supports freight budgeting and procurement analytics for cross-border trade operations.

**Focus Areas:** Landed Cost · Route Optimization · Carrier Selection · Container Pricing · Freight Budgeting

**Outcome:** Sharper cost estimation · Better trade margin · Smarter procurement

### **Title: E-Commerce & Retail Logistics**

**Subtitle:** *Real-time shipping cost optimization across the retail supply chain.*

**Crux:** Optimize shipping costs in real time across multi-modal logistics, analyze regional delivery costs, and manage warehouse-to-customer shipment pricing. FreightIQ also provides peak-season freight pricing visibility for retail and D2C operations.

**Focus Areas:** Shipping Cost Optimization · Multi-Modal Pricing · Regional Delivery Analysis · Last-Mile Costs · Peak-Season Pricing

**Outcome:** Lower shipping spend · Better peak-season readiness · Higher fulfillment margin

### **Title: Manufacturing & Industrial Supply Chains**

**Subtitle:** *Inbound and outbound shipment pricing for industrial supply chains.*

**Crux:** Automate inbound and outbound shipment pricing, compare vendor freight costs, and apply intelligent bulk cargo and container pricing. FreightIQ delivers supply chain

transportation analytics and production logistics cost optimization across the industrial value chain.

**Focus Areas:** Inbound/Outbound Pricing · Vendor Comparison · Bulk Cargo · Supply Chain Analytics · Production Logistics

**Outcome:** Lower transportation cost · Better vendor benchmarking · Stronger supply chain visibility

### **Title: Air Cargo & Express Logistics**

**Subtitle:** *Urgency-aware pricing for time-critical air and express logistics.*

**Crux:** Optimize pricing for urgent shipments, compare carrier availability and cost dynamically, and apply priority-based pricing logic. FreightIQ also enables express logistics margin analysis and international air freight quotation automation at enterprise scale.

**Focus Areas:** Urgent Shipment Pricing · Carrier Availability · Priority-Based Pricing · Express Margin Analysis · Air Freight Quoting

**Outcome:** Faster express quoting · Stronger margin on urgency · Better carrier match

### **Title: Global Shipping & Transportation Enterprises**

**Subtitle:** *Enterprise-wide freight pricing standardization across regions and routes.*

**Crux:** Standardize freight pricing across the enterprise, monitor global route pricing intelligence, and analyze cross-region carrier performance. FreightIQ also delivers historical freight trend analysis and centralized pricing governance for global logistics networks.

**Focus Areas:** Enterprise Pricing Standardization · Global Route Intelligence · Cross-Region Analytics · Historical Trends · Pricing Governance

**Outcome:** Consistent global pricing · Stronger governance · Network-wide intelligence

---

## **7. CTA Banner (Bottom of Page)**

---

### **Layout suggestion**

Full-width banner with brand gradient background. Large centered headline + sub-line + two CTA buttons. Optional: a sample freight quote screenshot or pricing-engine visualization alongside the CTA — strong credibility cue for logistics buyers.

### **Headline (H2)**

**Transform Freight Pricing Into Competitive Advantage.**

### **Sub-line**

Intelligent pricing. Faster quotes. Smarter logistics. See how FreightIQ automates and optimizes freight pricing operations with AI-driven intelligence and real-time carrier connectivity.

### **CTAs**

- Primary CTA: Book a Live Pricing Demo → (links to demo form / Calendly)

- Secondary CTA: Download the Freight Pricing Playbook → (links to gated PDF / asset)

### Closing tagline (small text under CTAs)

*FreightIQ — Dynamic Freight Pricing Built for Modern Logistics Operations.*

---

## Developer Notes

---

1. Heading hierarchy: Single <h1> for 'FreightIQ' (hero). All section headings = <h2>. Capability and use-case card titles = <h3>.
2. SEO schema: Add SoftwareApplication schema (schema.org). Set applicationCategory: 'BusinessApplication', name: 'FreightIQ', provider: 'Techknomatic Services'.
3. Anchor links: Add jump anchors for #what-we-solve, #how-it-works, #integrations, #use-cases, #demo — useful for hero CTAs and internal navigation.
4. Multi-modal badge: A prominent 'LCL · FCL · Air · Multi-Modal' badge or strip near the hero is a strong commercial signal for freight forwarders — multi-modal coverage is a top evaluation criterion in this category.
5. Sample-quote preview opportunity: Logistics pricing is a visual product — embed 1–2 sample freight quote screenshots or a side-by-side carrier comparison visual between Capabilities and Architecture to convey 'instant quote generation' tangibly.
6. Image alt text: Architecture diagram should have descriptive alt text (e.g., alt='FreightIQ 5-stage pricing flow: Carrier Connectivity, Pricing Intelligence, Margin Optimization, Historical Analytics, Quote Generation').
7. Mobile collapse: Capability 3×2 grid → 1 column. Architecture 5-stage horizontal flow → vertical stepper. Industries 3×2 grid → 1 per row. Use cases 3+3 → 1 per row.
8. Internal linking: Link 'Historical Freight Analytics' capability to the Business Intelligence services page. Link 'Real-Time Carrier API Integration' to the Data Engineering services page. Cross-sell + SEO value.
9. CTA tracking: Tag CTAs with GA4 event names — cta\_hero\_pricing\_demo, cta\_footer\_pricing\_demo, cta\_playbook\_download, cta\_industry\_tile\_<industry>. The playbook download is a high-intent lead signal; treat downloads as MQLs.
10. Carrier ecosystem strip: A 'Carriers and systems we work with' logo strip below the Integration section is strong credibility for logistics buyers. Include when partner logos are available.
11. ROI / metric callouts: Wherever possible, add concrete metrics ('quote time: hours → seconds', 'X% margin lift', 'Y% faster cycle time') as small accent callouts. Logistics buyers respond strongly to quantified outcomes.
