

Business Intelligence — Website Page Content

Services / Business Intelligence Practice

Page URL suggestion: /services/business-intelligence

Meta Title (SEO, ≤60 chars): Business Intelligence Services | Power BI · Tableau · Qlik

Meta Description (SEO, ≤160 chars): Transform enterprise data into trusted decisions. Techknomatic delivers BI strategy, dashboard development, governance, and embedded analytics on Power BI, Tableau, and Qlik.

Primary Keywords: business intelligence services, BI consulting, Power BI dashboard development, Tableau implementation, Qlik analytics, enterprise BI strategy

Secondary Keywords: BI governance, embedded analytics, self-service BI, BI Centre of Excellence, row-level security, dashboard design, BI roadmap, BI for insurance, BI for oil and gas

H1: Business Intelligence Services

1. Hero + Tagline

Main Header (H1)

Business Intelligence

Tagline (H2 / sub-hero)

Turning Data into Decisions — At Speed and Scale.

Hero supporting line

Enterprise-grade BI strategy, dashboard development, and governance — engineered for adoption, not just delivery. Built on certified Power BI, Tableau, and Qlik expertise, with deep industry depth in insurance, IT operations, energy, manufacturing, and retail.

Hero CTAs

- Primary button: Request a BI Assessment
- Secondary button: View Our Dashboards Portfolio

Hero visual suggestion

Composite visual showing 3–4 representative dashboard screenshots (e.g. claims TAT dashboard, ITSM SLA monitor, production KPI view) layered over an enterprise data flow diagram — conveying both the visual quality of delivery and the underlying engineering rigor. Optional: a small 'Power BI · Tableau · Qlik certified' badge strip.

2. About the Service

Section Heading: From Reports to Real Decisions

Opening paragraph

Most enterprises don't suffer from a lack of data — they suffer from a lack of trusted, actionable insights. Dashboards exist, but adoption is low. Reports are produced, but decisions still wait. Techknomatic helps organizations close that gap with end-to-end Business Intelligence services that combine strategy, design-led dashboard development, governance, and adoption — so the analytics you invest in actually change how the business decides.

Second paragraph

Built on deep, certified expertise across Power BI, Tableau, Qlik, and custom analytics platforms — and backed by strong data engineering capabilities — our BI practice goes beyond traditional reporting. We focus on building end-to-end analytics solutions that drive measurable business outcomes: faster decisions, higher adoption, defensible governance, and a single source of truth your leadership can rely on.

3. What We Offer

Section Subheading

Five core service offerings that span the full BI lifecycle — from strategy and roadmap to dashboard development, governance, and sustained adoption.

Layout suggestion

3-column × 2-row grid of cards (icon + title + 1-line description + 4–6 supporting bullets). With 5 offerings, the 6th cell holds a “Talk to a BI Expert” mini-CTA card with a contact button.

Offering 1 — BI Strategy & Roadmap

Define the analytics future state — platform, data, governance, and adoption — before writing the first dashboard.

- Current-state BI maturity assessment across people, process, platform, and data
- Target-state architecture and tool selection (Power BI / Tableau / Qlik / hybrid)
- BI roadmap with phased delivery milestones and success metrics
- BI Centre of Excellence (CoE) design and operating model
- ROI modeling and business case development for analytics investments

Offering 2 — Dashboard Design & Development

Design-led dashboards engineered for executive clarity, operational decision speed, and analyst depth.

- Executive, operational, and analytical dashboard development
- Design-led UX with audience-appropriate information density
- Power BI, Tableau, and Qlik native development
- Custom visualization development for specialized analytical needs
- Performance optimization for large-scale enterprise datasets
- Mobile-responsive and embedded dashboard delivery

Offering 3 — BI Governance & Centre of Excellence

Defensible governance that scales analytics without creating bottlenecks — trust as a delivery outcome.

- BI governance framework definition and rollout
- Row-level and object-level security implementation
- Workspace, dataset, and dashboard certification standards
- Version control, deployment pipelines, and DevOps for BI
- BI Centre of Excellence operating model and team enablement
- Audit, lineage, and compliance reporting

Offering 4 — Self-Service & Embedded Analytics

Extend BI beyond the BI team — with self-service for business users and embedded analytics in operational applications.

- Self-service BI enablement for business and operational users
- Semantic model design for safe, governed self-service
- Embedded analytics integration into customer and internal applications
- Power BI Embedded and Tableau Embedded implementation
- Dataset certification and shared semantic layers
- Business user training and analytics literacy programs

Offering 5 — BI Modernization & Migration

Move from legacy BI estates to modern cloud analytics — without losing adoption, governance, or institutional knowledge.

- Migration from legacy BI tools (SAP BO, Cognos, MicroStrategy) to modern platforms
- Cloud BI modernization on Azure, AWS, and GCP
- Report and dashboard rationalization — retire, replace, rebuild
- Data model and semantic layer modernization
- Coexistence strategy during phased migration
- User onboarding and adoption acceleration for the new platform

4. Tools & Technology

Section Subheading

Deep, certified expertise across the three platforms that dominate enterprise BI — we recommend the right tool for your context, not the one we know best.

Layout suggestion

3 platform cards side-by-side on desktop (Power BI · Tableau · Qlik), each with logo, 1-line positioning, and capability chips. Stack vertically on mobile. Add the data-source strip below.

Microsoft Power BI

Enterprise BI for Microsoft-native organizations — deep integration with the Azure and Microsoft 365 ecosystem.

Our capabilities: Dashboard development · Paginated reports · Power BI Premium and Embedded · DAX optimization · Dataflows and semantic models · Row-level security · Power BI Service governance · Azure Synapse and Fabric integration

Tableau

Best-in-class visual analytics — for organizations that prioritize design-led data exploration and analyst empowerment.

Our capabilities: Tableau Desktop and Server / Cloud · Custom visualization development · Tableau Prep data preparation · LOD calculations and advanced analytics · Embedded analytics · Multi-tenant governance · Data source certification · Performance optimization

Qlik

Associative analytics for organizations with complex, multi-source data relationships and large analytical user bases.

Our capabilities: Qlik Sense and QlikView · Associative engine design · Set analysis and advanced expressions · Qlik NPrinting · Mashup and embedded development · Multi-stream and section-access security · Qlik Cloud governance · Data integration via Qlik connectors

Data Sources We Connect To (strip below the platform cards)

SAP · Oracle · SQL Server · Salesforce · Snowflake · Databricks · Azure Synapse · BigQuery · Redshift · REST APIs · Flat Files · ServiceNow · Jira · and 50+ enterprise systems.

5. Our Approach

Section Subheading

A proven 5-step delivery framework that moves you from scattered reports to a trusted analytics environment — adoption built in from day one.

Layout suggestion

Horizontal 5-node stepper on desktop, vertical numbered cards on mobile. Each node: number + phase name + 1-line description + 2–3 key activities.

Step	Phase	What We Do
01	Discover	Assess the current BI estate, business priorities, data landscape, and adoption gaps. Define success criteria and target outcomes with stakeholders.
02	Design	Architect the BI solution — data model, semantic layer, dashboard structure, governance framework, and security model. Design-led wireframes before development.
03	Build	Develop dashboards, semantic models, and governance artifacts on the chosen platform (Power BI / Tableau / Qlik). Iterative delivery with stakeholder reviews.
04	Deploy	Roll out to users with workspace setup, row-level security, deployment pipelines, performance tuning, and integration into existing portals or applications.
05	Sustain	Drive adoption through training, BI CoE enablement, ongoing dashboard governance, performance monitoring, and continuous improvement cycles.

Closing line

Our approach is engineered for adoption — because a dashboard that ships is only valuable if it gets used.

6. Why Technomatic for Business Intelligence

Section Subheading

Six differentiators that separate dashboards that ship from dashboards that get used.

Layout suggestion

3-column × 2-row grid of value-prop cards (icon + bold differentiator + supporting line). Stack to 1 column on mobile.

1. Design-Led Dashboard Development

We don't just put data on a screen — we design for the audience, the decision, and the moment of use. Executives, operators, and analysts each get the right level of depth and density.

2. BI + Data Engineering End-to-End

Our BI practice is backed by a deep Data Engineering capability — so the pipeline behind every dashboard is as engineered as the dashboard itself. No upstream gaps, no broken refreshes.

3. Multi-Platform Certified Expertise

Certified depth in Power BI, Tableau, and Qlik. We recommend the platform that fits your stack, your skills, and your scale — not the one we're trying to sell.

4. Adoption-First Delivery

Every engagement includes a structured adoption plan — user enablement, BI CoE operating model, and post-go-live engagement — because the success metric is usage, not delivery.

5. Industry-Depth Practice

Deep delivery experience in insurance, IT operations and ITSM, oil and gas, manufacturing, and retail — we bring domain context, not just BI tools, to every engagement.

6. Governance & Trust by Design

Row-level security, certified datasets, deployment pipelines, and audit lineage are built into every delivery — so the analytics scale without becoming a governance liability.

7. Use Cases

Section Subheading

High-impact BI deployments across our priority industries — from executive visibility to operational intelligence.

Layout suggestion

5 compact horizontal cards in a 3+2 layout. Each card: Industry → Subtitle → Crux (~45 words) → Example Dashboards strip → Outcome tag.

Industry: Insurance

Subtitle: *Enterprise-wide visibility across claims, underwriting, policy servicing, and risk operations.*

Crux: Unified executive dashboards for claims settlement efficiency, underwriting productivity, premium leakage analysis, fraud indicators, policy lapse trends, and agent/channel performance. We enable insurers to improve operational transparency, reduce claim turnaround times, optimize underwriting decisions, and strengthen portfolio profitability with real-time decision intelligence.

Example Dashboards: Claims TAT · Loss Ratio Monitoring · Underwriting Productivity · Policy Renewal Trends · Fraud & Risk Analytics

Outcome: Improved claims efficiency · Better underwriting control · Stronger portfolio profitability

Industry: ITSM & Enterprise Operations

Subtitle: *Real-time operational intelligence for enterprise IT and shared services.*

Crux: Centralized BI platforms for monitoring SLA adherence, ticket lifecycle performance, incident trends, service desk productivity, change management impact, and infrastructure availability. We help IT leadership proactively identify bottlenecks, improve service delivery, optimize support operations, and maintain enterprise-wide operational visibility across IT ecosystems.

Example Dashboards: SLA Compliance · Incident Trends · MTTR Analysis · Change Success Rate · Service Desk Productivity

Outcome: Higher SLA adherence · Faster issue resolution · Improved operational efficiency

Industry: Oil & Gas

Subtitle: *Operational visibility across upstream, midstream, and downstream business functions.*

Crux: Advanced analytics dashboards for production monitoring, drilling performance, refinery throughput, asset utilization, safety compliance, procurement spend, and logistics operations. We provide energy enterprises with actionable insights to optimize field operations, reduce unplanned downtime, improve HSE compliance, and drive data-backed operational decision-making.

Example Dashboards: Production KPIs · Refinery Performance · Asset Utilization · HSE Compliance · Procurement & Logistics Analytics

Outcome: Reduced downtime · Improved operational efficiency · Enhanced compliance visibility

Industry: Manufacturing

Subtitle: Plant-floor visibility and supply-chain intelligence.

Crux: Operational dashboards for OEE tracking, production efficiency, downtime root-cause analysis, quality metrics, inventory movement, and supply-chain visibility. We empower manufacturing leaders with near real-time operational intelligence to improve throughput, reduce wastage, and optimize production planning across plants.

Example Dashboards: OEE · Downtime Analysis · Quality KPIs · Inventory Visibility · Supply Chain Analytics

Outcome: Higher productivity · Reduced operational waste · Improved delivery reliability

Industry: Retail & E-Commerce

Subtitle: Turn transaction data into merchandising and customer intelligence.

Crux: Sales and customer intelligence dashboards for revenue trends, customer cohorts, inventory movement, campaign performance, basket analytics, and regional demand forecasting. We help retailers make faster merchandising decisions, optimize promotions, and improve customer retention through data-driven visibility.

Example Dashboards: Sales Trends · Customer Cohorts · Inventory Turn · Basket Analytics · Campaign Performance

Outcome: Smarter merchandising · Better customer retention · Improved sales visibility

8. CTA Banner (Bottom of Page)

Layout suggestion

Full-width banner with brand gradient background. Large centered headline + sub-line + two CTA buttons. Optional: a small dashboard portfolio carousel preview alongside the CTA — because for a BI services page, showing the visual quality of past delivery is the strongest credibility cue.

Headline (H2)

Ready to Transform Your Data into Decisions?

Sub-line

Request a BI assessment to understand your current analytics maturity, identify the highest-impact opportunities, and see how Techknomatic delivers BI engagements that get used — not just shipped.

CTAs

- Primary CTA: Request a BI Assessment → (links to contact / Calendly)
- Secondary CTA: View Our Dashboards Portfolio → (links to portfolio / case studies)

Closing tagline (small text under CTAs)

Business Intelligence Services — Strategy. Dashboards. Governance. Adoption.

Developer Notes

- Heading hierarchy: Single <h1> for 'Business Intelligence' (hero). All section headings = <h2>. Card titles inside sections = <h3>.
- SEO schema: Add Service schema (schema.org) for the page — serviceType: 'Business Intelligence', provider: 'Techknomatic Services'. Consider adding FAQPage schema for queries like 'Power BI vs Tableau for enterprise', 'BI for insurance industry', 'BI Centre of Excellence setup'.
- Anchor links: Add jump anchors for #what-we-offer, #tools, #approach, #why-us, #use-cases, #assessment — useful for hero CTAs and internal navigation.
- Use case priority order: Insurance and ITSM lead the use cases section based on practice priority. Oil & Gas placement at #3 reflects active commercial focus. The ordering should also drive industry-specific landing-page priority for SEO and ad campaigns — consider building dedicated /services/bi-for-insurance and /services/bi-for-oil-and-gas sub-pages if they're high-conversion industries.
- Dashboard portfolio integration (highest-impact asset): The 'View Our Dashboards Portfolio' CTA should link to a gated or ungated dashboard gallery. For a BI services page, showing real dashboards is the conversion equivalent of 'Talk to the product' on our AI product pages. Even 6–8 anonymized screenshots build significant trust. Place a 2–3 dashboard preview strip in the hero or just above the CTA banner.
- Platform certifications badge strip: If Techknomatic holds formal Microsoft Power BI, Tableau, or Qlik partner certifications, place a badge strip in the hero and in the Tools & Technology section. Certified partner status is a high-signal credibility cue for enterprise BI buyers.
- Internal linking: Link 'BI + Data Engineering End-to-End' differentiator (Why Us card #2) to the Data Engineering services page. Link 'Self-Service & Embedded Analytics' offering to relevant case studies if available. Link 'BI Modernization & Migration' to a Cloud or Data Modernization services page if one exists.
- Cross-product links to platforms: Link the 'ITSM & Enterprise Operations' use case to InsightSM product page (BI services + InsightSM = full ITSM analytics offering). Link 'ITSM' differentiators to CXO Nexus product page (conversational BI on top of dashboards). These represent natural cross-sell from services into platform products.
- Image alt text: For every BI platform logo (Power BI, Tableau, Qlik), use descriptive alt text (e.g., alt='Microsoft Power BI — enterprise BI platform for Microsoft-native organizations').
- Mobile collapse: 'What We Offer' and 'Why Techknomatic' 3×2 grids → 1 column. Tools & Technology 3-card row → stacked. 'Our Approach' 5-node stepper → vertical timeline. Use Cases 3+2 grid → 1 per row.
- CTA tracking: Tag CTAs with distinct GA4 event names — cta_hero_bi_assessment, cta_footer_bi_assessment, cta_portfolio_view, cta_industry_card_<industry>. The portfolio view is a high-intent signal — treat sustained gallery engagement as a sales-qualified lead.
- ROI / metric callouts: Where possible, add concrete metrics from real engagements ('X% reduction in claims TAT after BI deployment', 'Y% SLA improvement on ITSM dashboards', 'Z hours saved per week per analyst') as small accent callouts. Quantified BI outcomes convert significantly better than generic capability claims.
- Use case credibility upgrade: The use cases are written from BI practice expertise but remain generic vs. real client examples. Recommend replacing with attributable case studies (client names anonymized where required) before go-live — even one real engagement story per industry would meaningfully strengthen credibility.
- Industry sub-page strategy: If Insurance and Oil & Gas are commercial priorities, consider building dedicated industry landing pages (/services/bi-for-insurance, /services/bi-for-oil-and-gas) that go deeper than the use case card here — specific KPIs, regulatory context, sample dashboards. High SEO value on long-tail industry queries.
